

Disabling Random MAC Address

Last Modified on 09/29/2025 11:53 am PDT

Every device on a network is uniquely identified by its MAC address. To improve privacy, devices can utilize private or random MAC addressing, although this occasionally results in problems connecting to the CLU network. With any network, you can pause or resume using a private MAC address. To activate or deactivate the feature on your devices, follow these steps:

Ask to Join Networks

Off >

Known networks will be joined automatically. If no known networks are available, you will have to manually select a network.

2. Select the **info icon** on the CLU network,

A rotating Wi-Fi address helps reduce tracking by changing your Wi-Fi address at various times. Tracking can happen when your address always appears the same to other devices and people using the same network as you.

Auto-Login

Low Data Mode

Low Data Mode helps reduce your iPhone data usage over your cellular network or specific Wi-Fi networks you select. When Low Data Mode is turned on, automatic updates and background tasks, such as Photos syncing, are paused.

Private Wi-Fi Address

Off >

Wi-Fi Address

70:B3:06:AE:FD:4A

Wi-Fi networks and devices can track other nearby Wi-Fi devices by their Wi-Fi address, even on secure networks. Off uses this device's hardware Wi-Fi Address, allowing tracking by networks and nearby Wi-Fi devices.

3. Select the "Private Wi-Fi Address" menu option.
